Abstract for the session

Ethnography as a research approach has evolved over time.

It has developed from its historical roots within the field of anthropology and is now used widely in a range of different contexts.

This first session of the Teesside Qualitative Researcher’s Forum will begin by considering the vast number of approaches which can now be used within ethnography. The session will then focus more specifically upon a few common approaches adopted in research, such as focused and critical ethnography, among others.
Choosing a methodology

- Interest
- Background
- Method
- Aim
- Question

? Methodology?
Definitions which agree with each other 😊

**Ethnography is...**

- **Observation**
- **Culture**
- ‘going native’

“A research **method** in which the researcher immerses him- or herself in a social setting for an extended period of time, observing behaviour, listening to what is said … and asking questions.”

*Bryman (2012)*

“Observation and participation … remain the characteristic features of the ethnographic approach”

*Atkinson et al. (2001)***
“A research method in which the researcher immerses him- or herself in a social setting for an extended period of time, observing behaviour, listening to what is said … and asking questions.”

Bryman (2012)

“ethnography is both a process and a product”

Tedlock (2003 p.165)

“If ‘methods’ are technical rules that define proper procedures, ‘methodology’ is the broad theoretical and philosophical framework into which these procedural rules fit”

Brewer (2000 p.2)
As it transpires ethnography is not as linear in approach as it would appear. It seemed to me to be more of an umbrella term which covers a wide range of approaches.

“Ethnography is not one particular method of data collection but a style of research that is distinguished by its objectives, which are to understand the social meanings and activities of people in a given ‘field’ or setting, and an approach, which involves close association with, and often participation in, this setting.” (Brewer, 2000 p.189)
By engaging with the literature I found over 30 different ‘types’ of ethnography.

<table>
<thead>
<tr>
<th>Participatory</th>
<th>Feminist</th>

</tbody>
</table>
How to choose the type?

• Back to the starting point of the research
Process of elimination

**Narrative** =
- Narrative enquiry
- Stories

**Institutional** =
Explore social relations that structure everyday lives. Maps translocal relations that coordinate peoples activities in particular local sites.

**Team** =
Conducted by *multiple* researchers at one or more research sites

**Collaborative** =
*Involving participants* in the research process. Participants are often in teams & are co-researchers.

**Focused ethnography** = (AKA Micro-ethnography)
- Understanding specific societal issues that affect different facets of practice.
- Enables researchers to understand the interrelationship between people and their environments.
Focused ethnography

My research choice will use focused ethnography, also known as micro-ethnography, to focus particularly upon one distinct issue within a culture (IPL) in specific settings (Adult Critical Care).

“Focused ethnography has emerged as a promising method for applying ethnography to a distinct issue or shared experience in cultures or sub-cultures and in specific settings, rather than throughout entire communities.” p.36

“Focused ethnography has emerged as a useful tool in gaining a better understanding of the experiences of specific aspects of people’s ways of life and being.” p.38

Cruz and Higginbottom (2013)
Focused Ethnography Examples

The role of nursing unit culture in shaping utilization behaviors
Scott and Pollock (2008)

The significance of social engagement in relocated older adults
Dupuis-Blanchard et al. (2009)

The inner door: toward an understanding of suicidal patients
Tzeng et al. 2010
My focused ethnography

An ethnographic study of the Inter-Professional Learning culture of NHS staff within the adult critical care clinical setting.

IPL in Adult Critical Care
Critical Ethnography

“Critical ethnography draws on cultural studies, neo-Marxist and feminist theories and research on critical pedagogies.

The aim is to theorize social structural constraints and human agency, as well as the interrelationship between structure and agency in order to consider paths towards empowerment of the researched.”

Gordon et al. (2001)

“Critical ethnography is an approach that is overtly political and critical, exposing inequalities in an effort to effect change.”

O’Reilly (2009 p. 51)
Critical Ethnography Examples

- Nursing, sexual health and youth with disabilities: a critical ethnography
  McCabe and Holmes (2014)

- Enhancing choice and improving outcomes through the deviation of childbirth risk discourses within a midwifery model of care.
  Dove (2013)

- Children’s experiences as hospital in-patients: Voice, competence and work. Messages for nursing from a critical ethnographic study
  Long & Lively (2013)
Auto-ethnography

Autoethnography is “a form of self-narrative that places the self within a social context”. Reed-Danahay (1997)

“At its most basic this refers to self-centred ethnographic writing, in which the central narrative threads are the selves of researchers and/or researched…. [Autoethnography] involves more personal attention being paid to a) why a research topic is chosen in the first place, b) how it gains and takes shape through the research process and c) how researchers, and researched and readers can all become involved in the process of interpreting its findings.” Crang and Crook (2007)
Auto-Ethnography Examples

Selling your soul to the devil: an autoethnography of pain, pleasure and the quest for a child.
Neville-Jan (2004)

Birth Injury, Disabling Families and Enabling Human Factors
Benson, D.V. (2014)
Unpublished Thesis

Autoethnography: a method of research and teaching for transformative education.
Belbase, Luitel, and Taylor (2008)

Participatory Ethnography

Participatory Research =

“Rather than passive ‘informants’ or ‘subjects’, research participants are now often encouraged to take an active part in the research process, empowered where possible to contribute, direct, redirect, and guide the research in ways that ensure their own perspective is given due weight.”

O’Reilly (2009 p.59)

In participant ethnography “researcher and participants jointly define certain aspects of the research design, discuss the findings, and sometimes write the final report together.”

Gobo (2008 p.146)

In its simplest terms, participatory ethnography involves participants in the research process.
Participatory Ethnography Examples

What is Participatory Research?
Cornwall and Jewkes (1995)

Participatory Research in Health: setting the context

! Language & choice of terms is very important! This article was actually about participant observation NOT participatory.

! Using participatory observation to understand older people’s experiences: lessons from the field
Tetley (2013)

What is Participatory Research? Cornwall and Jewkes (1995)
Summary  O’Reilly (2009 p.3)

• Ethnography is a methodology – a theory, or set of ideas – about research that rests on a number of fundamental criteria. Ethnography is iterative-inductive research; that is to say it evolves in design through the study.

• Ethnography draws on a family of methods, involving direct and sustained contact with human agents, within the context of their daily lives (and cultures), watching what happens, listening to what is said, and asking questions.

• It results in richly written accounts that respect the irreducibility of human experience, acknowledges the role of theory, as well as the researcher’s own role, and view humans as part object/part subject.
